Job Specification

For: Systems Administrator / Engineer

Ref: VR/24637

Job Description

Systems Analyst - E-Mobility Software & Integration
Location: Maynooth, Co. Kildare (with flexibility for hybrid/remote work)
Reports to: Chief Technology Officer (CTO)
Employment Type: Full-Time, Permanent

About the Company:
We are an innovative and rapidly scaling Irish EV company delivering cleaner, smarter mobility solutions. Following our successful expansion into the UK market, we're looking for a proactive and technically skilled Systems Analyst to support the integration of our key software systems and ensure our digital infrastructure aligns with our operational goals in both jurisdictions.

Role Summary:
The Systems Analyst will be responsible for managing and supporting the integration between our core platform and our central operational software Ocean. You will also play a key role in evaluating and optimising Charge Point Management Systems (CPMS) and various e-mobility SaaS solutions to enhance operational insight, scalability, and user experience.

Key Responsibilities:
System Integration & Management
·   Lead the integration of Swarko with Ocean, ensuring seamless data flow and system compatibility.
·   Map and align data structures between systems; troubleshoot interface issues and resolve integration errors.
·   Work with internal stakeholders and external vendors to define system specifications and testing requirements.
Platform Support & Optimisation
·   Act as the subject matter expert (SME) for Swarko, Ocean, and associated e-mobility SaaS tools.
·   Monitor and maintain system performance; ensure uptime, reliability, and user satisfaction.
·   Recommend and implement enhancements to CPMS and backend platforms.
Business Insight & Reporting
·   Provide data-driven insights across e-mobility platforms to support strategic decision-making.
·   Develop dashboards and reports on usage trends, efficiency metrics, and system performance.
·   Liaise with Finance, Operations, Sales and Technical teams to translate business needs into system capabilities.
Project Management & Collaboration
·   Manage timelines, deliverables, and stakeholder communications for all integration and software-related projects.
·   Collaborate with external SaaS providers, developers, and internal IT to coordinate releases, patches, and upgrades.
·   Contribute to business continuity planning and risk mitigation strategies related to software operations.

Requirements:
·   Bachelors degree in Computer Science, Information Systems, or related field.
·   3-5 years of experience in a Systems Analyst, IT Business Analyst, or Software Integration role.
·   Experience with e-mobility platforms, CPMS, or energy/EV sector software is highly desirable.
·   Hands-on experience with Ocean, or similar mobility/SaaS platforms is a major plus.

- ·   Strong understanding of system architecture, APIs, and data integration tools.
- ·   Proficient in SQL, data mapping, and working with RESTful APIs.
- ·   Strong analytical and problem-solving skills; excellent communication and stakeholder management.

What We Offer
- ·   Competitive salary and executive bonus package - €50 - 60K
- ·   LTIP
- ·   Bonus
- ·   Pension
- ·   Healthcare
